PERSONAL PROFILE

Computer Science student interested in Artificial Intelligence, frontend development, and UI/UX design, with hands-on experience through hackathons, software engineering simulations, and personal projects. A quick learner and self-motivated problem solver with strong analytical skills, adaptable to fast-paced environments and comfortable navigating ambiguous technical challenges. Passionate about learning new technologies and building practical, user-focused solutions.

EDUCATION

Indian Institute Of Information Technology, Pune, *Bachelor of Technology, Computer Science* | Graduating Year: 2028 Pune, India

TECHNICAL SKILLS

Programming Languages — C, C++, Python, Java, JavaScript, SQL
Web Technologies — HTML, CSS, React.js
Frameworks and Libraries — React.js, NumPy, Pandas
Database Systems — MySQL, PostgreSQL, Amazon RDS, Amazon DynamoDB
Tools and Platforms — Git, Github, Vercel

COURSES

Data Structures & Algorithms · DBMS · OOP · Operating Systems · Computer Networks · Discrete Mathematics · Cryptography & Network Security

AREA OF INTERESTS

Artificial Intelligence & Machine Learning · Frontend Development · UI/UX Design · Web Development · Data Analysis · Cloud Technologies

ACCOMPLISHMENTS

Flipr Hackathon 2025 — Inventory Management System

- Developed a full-stack inventory management system with role-based access control, product management, inventory tracking, barcode scanning, low-stock alerts, and reporting.
- Worked with React, Node.js, Express.js, and PostgreSQL to build the frontend, REST API, authentication, database functionality, and data visualization.

Smart India Hackathon 2025 — Groundwater Monitor

- Developed a GIS-based Progressive Web App for visualizing groundwater aquifers, recharge zones, and water-level trends across India using sensor and government datasets.
- Worked with React, FastAPI, Leaflet, Chart.js, Tailwind CSS, and Python for frontend development, geospatial visualization, data analysis, and backend APIs.

AWS Hackathon 2026 — DharaAI

- Developed DharaAI, a multilingual voice-enabled agricultural assistant designed to help farmers access information through regional languages.
- Worked with Amazon Transcribe, Amazon Translate, Amazon Bedrock, and Amazon Polly to design the voice-to-AI-response pipeline and multilingual agricultural interaction.

PROJECTS

FairShare — Hostel & Flat Expense Splitter 🔗

React, JavaScript, Vite, Firebase Authentication, Cloud Firestore, Python, GitHub Actions, GitHub Pages

- Developing an expense-sharing application for students and roommates to manage food, rent, utilities, and trip expenses with monthly summaries and debt tracking.
- Implementing expense splitting, settlement history, balance calculations, and a user-friendly dashboard for simplifying shared expense management.

PolyglotPolly — Personalized Language Pronunciation Platform 🔗

React, TypeScript, Vite, Cloudflare Workers, Supabase, AWS Bedrock, Amazon Polly, Workers AI

- Developed a browser-based language learning platform that creates a **personal voice profile from a user's pitch** and adapts reference speech to the learner's natural register.
- Implemented pronunciation practice across **41 languages**, with speech recognition used to evaluate **word-level accuracy and fluency** and provide targeted corrections.

CERTIFICATIONS

Quantium — Software Engineering Job Simulation | Forage | Jan 2026 🔗

- Completed practical tasks involving local development setup, data processing, and Dash application development and improvement.
- Tested the application and completed an automated test suite bonus task.
